DETAILED ACTION

1. Applicant's arguments see Remarks, filed Oct. 31, 2008, with respect to claims 28-29 and 35-36 have been fully considered and are persuasive. The rejection under **35 USC § 112** of claims 28-29 and 35-36 have been withdrawn.
2. Claims 28 and 35 have been amended.
3. Claims 1-23, 26-27, 30, 34 and 37 have been canceled.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims are rejected under 35 U.S.C. 102(e) as being anticipated by Nielson (5,684,827).

Regarding claims 28-29, and 35-36, Nielsen discloses a system for controlling the operation mode of an adaptive equalizer comprising:

determining the direct current (DC) level of a received signal during an interval time (see abstract, col.3, lines 15-31, fig.1, element 22, claims 1-3, and 14-16 of Nielson);

controlling the operating mode of the equalizer in response to the determined DC level, wherein the received signal comprises multi-level symbols representing data and

a field synchronizing signal, said symbols being characterized by a DC offset and wherein the determining step further comprises processing the field synchronizing to determine the variation of the DC offset in the received signal, wherein the field synchronizing signal comprises a pseudo random number symbol sequence and wherein the processing comprises sampling a part of the pseudo random number symbol sequence (see abstract, col.6-7, fig.1, claims 1-3, and 14-16 of Nielson).

Allowable Subject Matter

6. Claims 24-25, 31-33, 38-41 are allowed.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
